

# PROTECT TEXAS PREVENT WILDFIRES

## SAFE DEBRIS BURNING

Escaped debris burning is one of the leading causes of wildfires in Texas.

Plan time to stay with your fire until it is out cold.

Always follow local outdoor burning regulations. Check with local officials for restrictions or burn bans.

Delay burning if the weather conditions are, or will be, hot, dry and windy.

Clear vegetation or other burnable material at least 10 feet around the burn site. Avoid any overhead obstructions and have tools and a water source on hand before beginning.
