Weatherization Assistance Program

Providing energy conservation measures to low-income households

What is the Weatherization Assistance Program?

The AACOG Weatherization Assistance Program (WAP) is funded by the Texas Department of Housing and Community Affairs and the United States Department of Energy.

The program is designed to help low-income people overcome the high cost of energy, through the installation of weatherization or energy conservation measures—at no cost.

How does the Weatherization Assistance Program work?

The program consists of four steps:

1. An application to determine income eligibility.
2. An energy audit of the home by a professional inspector.
3. Installation of weatherization measures.
4. A final inspection to assure work quality completeness and client satisfaction.

Who is eligible for the Weatherization Assistance Program?

A household that meets income eligibility requirements may be eligible for weatherization services.

An applicant may qualify for the AACOG WAP program but the home may still be disqualified if the home has:

- Poor electrical wiring
- Foundation problems
- Roof leaks
- Plumbing problems

Are renters eligible for services? Yes. The owner of the home is required to sign a document allowing AACOG to Weatherize the home.

What type of weatherization assistance can I receive?

Weatherization assistance you receive may or may not include:

- Attic, wall, and/or floor insulation
- Weather-stripping and caulking
- Window glass pane repair
- Replacement of gas water heaters, space heaters, HVAC, or window air conditioning units that are operating inefficiently.

We will not be able to tell you exactly what measures will be installed in your home until after the energy audit is conducted.
